General Description

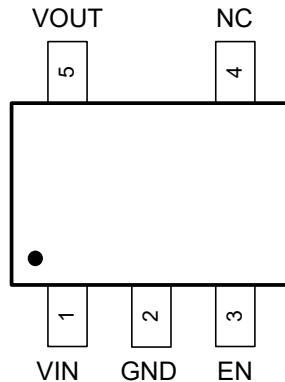

The SNE2301 series are low dropout linear regulators and optimized to provide a high performance solution for battery power system to delivery low quiescent current. The device offer a new level of cost effective performance in cellular phones, laptop and notebook computers, and other portable devices. SNE2301 can provide output value in the range of 1.8V~3.6V by every 0.1V step.

The SNE2301 series are designed to make use of low cost ceramic capacitors which ensure the stability of the output current, and enhance the efficiency in order to prolong the battery life of those portable devices.

The SNE2301 regulators are available in UTDFN-1x1-4L, SOT23-5 packages. Standard products are Pb-free and Halogen-free.
